Health Care Providers participating in the H1N1 Benefit for the Uninsured

In response to the H1N1 outbreak, the Wisconsin Department of Health Services has partnered with a state-wide network of health care providers to provide a limited H1N1 benefit for the uninsured. The H1N1 benefit for the uninsured was activated Monday, November 2, 2009 and will remain activated until further notice.

The following information is for health care providers who have partnered with the Department to provide the H1N1 benefit for the uninsured. These participating providers should consult this link regularly for updated policy guidance and clarification on the benefit.

Billing the Department
Participating providers must use the Roster Billing Form to receive both the $15 vaccine administration fee and the $48 bundled treatment fee.

Participating providers should follow the instructions in the “Roster Billing Form Completion Instructions” document to complete the Form.

While the Form can be submitted either on paper or electronically, the Department strongly encourages electronic submission to facilitate processing. For electronic submission, providers must encrypt and password protect all submitted Forms. Providers should reference the document titled “Roster Billing Form Encryption Instructions for Electronic Submission” for step-by-step information on encrypting electronic files.
