Issue 13: Hygiene at Home

Keep eating utensils and work surfaces clean

1. If water is scarce, scrub dishes with brushes (or clean sand and newspaper) to remove food particles & grease, and then wash in hot soapy water

2. Use unscented household bleach for disinfecting solutions.

**WARNING**: Do NOT add any product with ammonia to a bleach solution

- For dishes and hard, non-porous surfaces, use 1 tablespoon liquid bleach in 1 gallon of water. Wet and then air dry. Do not rinse.
- For general disinfecting (floors, counters, etc.), use 3/4 cup liquid bleach in 1 gallon of water. Soak small items for 5 minutes. Surfaces such as floors or counters should be wet liberally and kept wet for 2 minutes. More info: http://www.clorox.com/solutions_reg_bleach.php

Personal hygiene

1. Wash hands regularly, especially after using the toilet. The general disinfecting solution (above) is a good hand rinse.

2. Bathing: Use a bucket or tote instead of the tub. For warm water, put the water in a black plastic bucket or black-painted pop bottles. Set these in the sun for two hours. When you’ve done bathing, save any dirty or soapy to pour in the toilet for flushing.

3. Cornmeal or cornstarch can be used as dry shampoos. Sprinkle liberally in the hair, and then brush vigorously.

4. Use only boiled or purified water for brushing your teeth or cleaning contact lenses.

Doing laundry without electricity

1. Use rubber or plastic tubs or buckets and a household plunger. Put water, detergent and clothes in the buckets. Cut a hole in the lid for the plunger handle (the agitator). Soak the clothes. Insert the plunger handle through the lid on the bucket and agitate.

2. Use a tub of clear water to rinse the clothes. Some may need hand scrubbing

3. Use the wringer of a mop bucket to remove water by hand. If you don’t have a mop bucket, wring clothes by hand

4. Air dry by hanging clothes on lines or hangers. In winter, you can air dry outside, but you may have to crack ice to remove it from the clothes.
